

Art Beyond Sight

.....
Bringing Art & Culture to All

May 1, 2026

Elisabeth Salzhauer Axel,
Founder, President, and CEO
Art Beyond Sight

To Whom It May Concern,

My name is Elisabeth Axel, and I am the Founder, President, and CEO of Art Beyond Sight (ABS).

I am writing to offer my strongest recommendation for Muhammad Tauha following his eight-week technology internship with our organization, where he contributed to the NYC Belongs / Project Access civic-access platform.

Muhammad worked alongside a developer during the planning and early implementation of a Drupal-based system architecture for a data-driven platform designed to support public access to NYC events, organizations, and accessibility resources. From early on, he demonstrated the ability to think beyond task execution and engage in system-level design and structured data thinking.

He contributed to defining content types, taxonomy structures, and entity relationships, helping ensure the platform could support scalable filtering, mapping, and future API integration. He showed a strong understanding of how frontend user experience depends on backend data integrity. He also helped shape form architecture and submission workflows, aligning user inputs with structured models for accessibility information, location data, and categorization to ensure consistent reuse across the system.

Muhammad also participated in discussions around permissions, roles, and governance, considering how administrators, partners, and community contributors interact with the platform.

He approached these challenges with both technical rigor and awareness of real-world application.

What distinguishes Muhammad is his ability to bridge technical implementation with user-centered design and accessibility. He consistently asked insightful questions about system behavior, user interaction, and how data-level decisions impact real outcomes. He was not limited to assigned tasks and contributed to how the system itself should be structured.

He also demonstrated strong communication skills, becoming effective at explaining technical concepts across disciplines, which is essential in collaborative development environments.

By the end of the internship, Muhammad was operating above typical intern expectations, contributing to foundational decisions and engaging thoughtfully with complex systems. I recommend him without reservation for academic programs, internships, and technical roles. He brings a strong combination of technical ability, systems thinking, curiosity, and reliability..

Sincerely,

Elisabeth Salzhauer Axel
